Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams (3,853,772) in combination with Sato et al (6,617,286).

Adams discloses extreme pressure lubricant compositions having improved water tolerence comprising a lubricating base oil and, as additives, (a) hydrated alkali metal borates in an amount of 1 to 25 weight %, (b) an alkaline earth metal sulfonate which may be overbased, and (c) succinimide compounds. Adams teaches that the compositions are effective in high load conditions such as in the gear sets used in automotive transmission differentials. The hydrated alkali metal borates are set forth in column 2, lines 54 et. seq., and include hydrated potassium borates. The sulfonate component includes calcium sulfonates as set forth in column 6, lines 8-20. The succinimide compounds are set forth in columns 8-9, and Adams teaches that the compositions may include additional additives. See column 9, lines 54-67. Applicant's invention differs by including a borated succinimide to the lubricant compositions. However, as evidenced by Sato et al ["Sato"], such additives are well-known in lubricant compositions suitable for use in transmissions.

Sato discloses a lubricating oil composition for continuously variable transmissions which comprise a base oil of lubricating viscosity and (a) a phosphorus-containing wear additive,

Art Unit: 1764

compositions.

1564

(b) a metal detergent including neutral and overbased alkaline earth metal sulfonates and salicylates, and (c) an ashless dispersant such as boron-containing succinimides. Sato teaches that the content of boron in the boron-containing product usually ranges from 0.1 to 5 weight % based on the total weight of the boron-containing succinimide. See column 5, lines 35-61. Having the prior art references before the inventors at the time the invention was made it would have been obvious to the skilled artisan to have followed the teachings of the prior art and to have added the borated succininmide component of Sato to the lubricant compositions of Adams if its known imparted properties were so desired. The examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the motivation relied on by the examiner is the teaching in Adams allowing for the addition of other additives to the

Page 3

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ellen M. McAvoy whose telephone number is (571) 272-1451. The examiner can normally be reached on M-F (7:30-5:00) with alt. Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
